

Degenerative Disc Disease

What it is

The discs are soft cushions between the bones of the spine. With age, they can dry out and get thinner. For some people, this causes back or neck pain. Many people have these changes and feel no pain.

Common symptoms

- Ongoing low back or neck pain
- Pain that is worse with sitting, bending or lifting
- Pain that flares and settles
- Pain that may spread to the buttock or thigh

Self-care tips

- Stay as active as you can. Short, easy walks may help.
- Change position often. Try not to sit for more than 30 to 45 minutes at a time.
- Heat or ice for 15 to 20 minutes may ease pain. Put a towel between it and your skin.
- Lift with your legs, keep the load close to your body, and do not twist.

What to expect at GSMC

At your visit: We ask about your symptoms and examine you.

Tests: You may need X-rays, an MRI or other tests. Not everyone needs them.

Your plan: We talk about your options, starting with the simplest steps. We decide together.

When to call us

- Pain that keeps getting worse, or does not get better with care
- New numbness, tingling or weakness in an arm or leg
- Pain with fever, chills or weight loss you cannot explain
- Pain that keeps you from sleeping or doing daily tasks

Call 911 or go to the emergency room for loss of bladder or bowel control, numbness in the groin or inner thighs, or sudden leg weakness.

Call 732-202-3000
