

Discogenic Back Pain

What it is

Discogenic pain is back pain that comes from a worn or damaged disc. The disc is the soft cushion between two bones of the spine. The pain is often deep and aching.

Common symptoms

- Deep, aching low back pain
- Pain that is worse with sitting or bending forward
- Pain that eases when lying down
- Occasional spread of pain into the buttock or thigh

Self-care tips

- Stay as active as you can. Short, easy walks may help.
- Change position often. Try not to sit for more than 30 to 45 minutes at a time.
- Heat or ice for 15 to 20 minutes may ease pain. Put a towel between it and your skin.
- Lift with your legs, keep the load close to your body, and do not twist.

What to expect at GSMC

At your visit: We ask about your symptoms and examine you.

Tests: You may need X-rays, an MRI or other tests. Not everyone needs them.

Your plan: We talk about your options, starting with the simplest steps. We decide together.

When to call us

- Pain that keeps getting worse, or does not get better with care
- New numbness, tingling or weakness in an arm or leg
- Pain with fever, chills or weight loss you cannot explain
- Pain that keeps you from sleeping or doing daily tasks

Call 911 or go to the emergency room for loss of bladder or bowel control, numbness in the groin or inner thighs, or sudden leg weakness.

Call 732-202-3000
